

Tek Kademeli Çift Yakıtlı Brülörler / Single Stage Dual Burners

75-214 kW

Paslanmaz Cr-Ni yanma başlıkları ile uzun yıllar sağlıklı yanma ve emisyon değerleri

Healthy combustion and low emission for many years with stainless Cr-Ni combustion heads

Yanma Odası Karşı Basıncına Bağlı Brülör Kapasite Eğrileri

Capacity Curves of Burner Against Counter Pressure of Combustion Chamber

Eğrilerde tayin edilecek değerler, brülör tiplerine göre; rejim halinde yanma odası basıncına bağlı olarak takribi yakılan yakıt miktarını gösterir.

Isı kazanları ve eşanjörlerinin yanma odası biçimlerine ve baca tiplerine göre brülörde yakılacak yakıt miktarını, kurulu tesiste yapılacak fiili ölçümler tayin eder.

The values to be determined at the curves, show approximate combusted amount of fuel in the combustion chamber according to burner types and depending on the combustion chamber pressure in normal working conditions.

The combustible amount of fuel for burner is determined by actual measurements at the current facility according to combustion chamber forms and flue types of boilers and heat exchangers.
